

The ROOF RESTORATION ADVANTAGE

Seamless No matter if your roof is 100 square feet or over 100,000 square feet, your roof will not have a single seam to leak on you in the future.

Fully-adhered Since Acrylic Coatings go on as a liquid and dries to a single monolithic roof membrane, the adhesion to the surface is exceptional. (I have the shoes to prove it.) Many roofs today utilize screwed down insulating board. Screws just cannot compare to 100% adhesion.

Energy Efficient Our super reflective white roofs can save you a substantial amount of money on your utility bills. Thus our roofs work for you by paying for themselves. See our LIFE CYCLE COSTING page.

Insulating Sprayed foam has the highest R-value of any roof insulating material at 7.14 per inch.

Self-flashing No flashing details around walls and penetrations to leak.

Sustainable Our roofs do not require expensive tear-offs down the road. To sustain our roofs, we only need to clean the roof and renew the white top coat.

Flexible Moves with the building; over 300 % elongation

Breathes All buildings have moisture that must go somewhere. Conklin coatings allow moisture vapor to escape. Single-ply membranes trap moisture. Not even all roof coatings breath.

Quick All components of the system are spray applied. This takes less time and labor, keeping costs down.

Versatile Acrylic can be applied to just about any surface. We can fill in voids and create a monolithic system across varying surfaces.

Lightweight Coatings and Poly Woven fabric are only weighs about 8 ounces per square foot.

Structural Increases the section modulus of the existing roof making it much stronger.

Relieves Ponding Spray can be sprayed in ponded areas to build them up level with the original roof surface prior to application of the foam to the entire roof.

No Tear Off Saves landfill costs, labor and liability. No tear off is required on most re-roofing applications.

Approved Conklin's premiere roof systems has all the credentials: Energy Star, Factory Mutual (FM 4470), UL 790 Class A, ICBO, Dade County FL-Benchmark.

Post Office Box 1329 Orange Park, FL 32067-1329

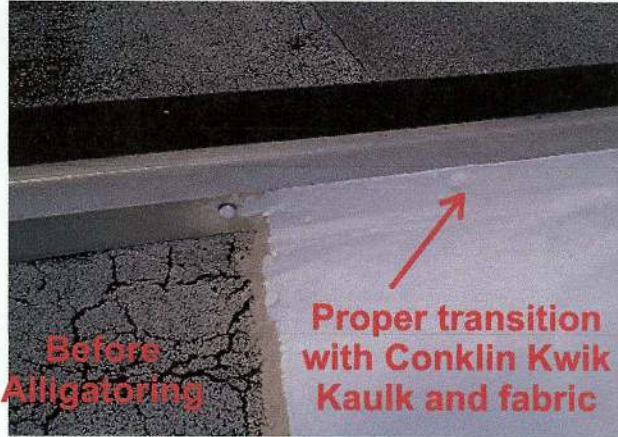

1. NO TEAR OFF EXPOSURED OF VALUED CONTENT
2. NO SIGNIFICANT EXTRA WEIGHT
4. COOL ROOF 80% REFLECTIVE COATING
4. WATER TIGHT 2 PLY ACRYLIC /ELASTOMERIC
5. 10 yr WARRANTY
6. RECOAT IN 10 YEARS TO REROOF
7. LOWEST MAINTENANCE ROOFING IN INDUSTRY
8. NO DOWN TIME - OPERATIONS CONTINUE
9. BUILDING COOL MORE EFFICIENTLY
LOWER UTILITIES COST (UP TO 15% LOWER)
10. Lowest LIFE-TIME Cost of any roof system availalbe!

**10 REASONS
TO CHOOSE**

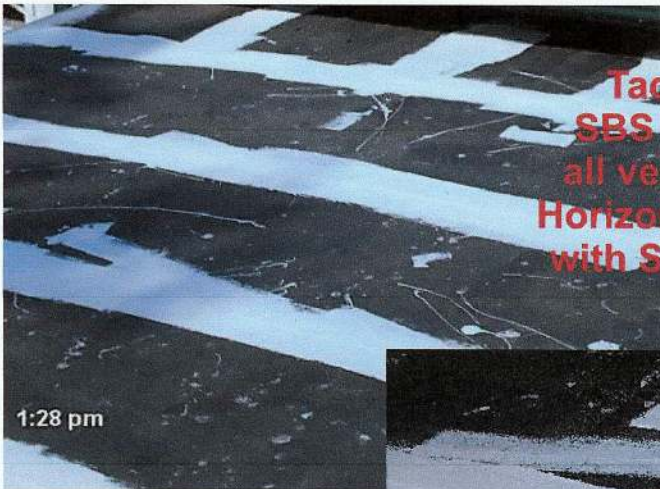

Competitor product with no caulking at transition -funnel formed when remove tape.

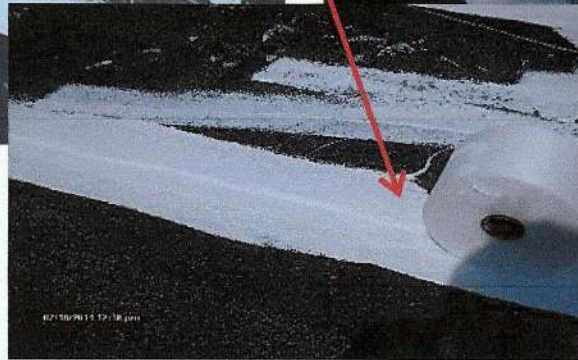

Before Alligatoring

Proper transition with Conklin Kwik Kaulk and fabric

1:28 pm

Tack Coat SBS and seal all vertical and Horizontal seams with SpunFlex II

02/10/06 11:19:18 pm

Single Ply Coating System curbs, vert and horz seams reinforce with SpunFlex II Spunwoven fabric. Top Coat with 12-14 dry mil Kwik Kaulk all transitions, penetrations

Full fabric 38" SpunFlex II curbs and field 24-30 dry mil with fabric

About Conklin Roof Systems:

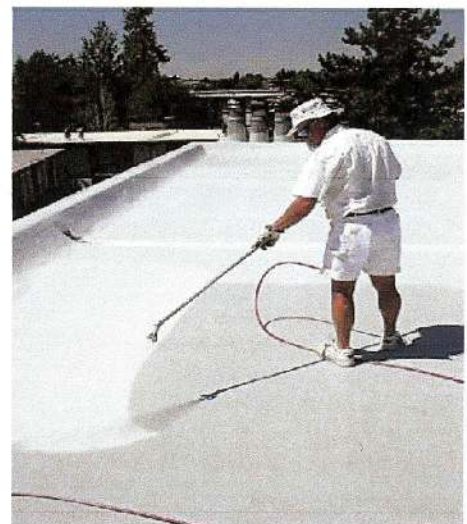

A fabric-reinforced ply system combines the leak-resistant seamless membrane of a liquid-applied system with the toughness and a tensile strength of a single-ply system. The reinforced fabric gives extra strength to the finished watertight coating membrane without adding significant weight. With its reflective, energy-saving white top coat, your finished ply system stands up against tough weather and offers strong long-lasting protection.

Rapid Roof III with SpunFlex fabric the third generation of Conklin's original roof coating offers the toughest roof protection available. With superior elongation and tensile strength, system, is designed to be lightweight, flexible, seamless and weatherproof. Comprised of a fire classified light tan base coat, and a highly reflective standard white top coat with a solar reflectivity of **84 percent**. Rapid Roof III cures to a tack-free, dirt-resistant finish. Rapid Roof III also offers the option of light blue, light tan and light gray top coats.

Available with the Recoat-system is a 10-year "leak free" warranty on material and labor at a nominal cost. The Conklin System, also doesn't interrupt the work of the building being roofed. The roof system can be written off in one year on taxes as "maintenance and repair" not depreciate out like a new metal roof, single ply, or a foam roof needs to be.

"Last fall, we put on our thirteenth Conklin roof since 1983 and all are without a leak. This is a multimillion-dollar development: some of the condominiums sell for over \$300,000. We can't afford leaks. I would recommend this system to anyone with a flat roof that doesn't want to be bothered with leaks."
